Game Designer with 5+ years of development experience specializing in content and technical design for live service titles. Proven track record of mastering complex tools and delivering in fast-paced environments.

PROFESSIONAL EXPERIENCE

Ghost Fox Games — Game Director – (Cosmic Carnage, Roblox Studio)

APR 2026 – Present

- Co-founded an independent studio of EA veterans building UGC experiences; accepted into the 2026 Roblox Incubator program
- Engineered and prototyped core PvP vehicular combat mechanics, weapon systems, and player customization using Luau in Roblox Studio during a 3-week sprint cycle
- Designed and implemented technical match structures and gameplay systems, maintaining clean technical documentation to streamline feature scaling across team members

EA, Maxis — Game Designer – (The Sims: Town Stories, Unity)

MAR 2024 – MAR 2026

- Bridged design and engineering teams by establishing technical specifications, scripting core event logic in AMP, and prototyping feature tools in Unity using C#
- Designed and iterated player-centric experiences, including the First-Time User Experience (FTUE), quests, and event loops to optimize player retention and progression
- Built custom engine toolsets in C# (3D asset loaders, cinematic tools, and component organizers) that improved team workflows and optimized game performance
- Authored comprehensive technical design documentation in Jira/Confluence and collaborated across disciplines to guide engineers on feature implementation and system behavior

EA — Technical Game Designer – (FIFA Mobile, EA Impact Engine)

SEPT 2022 – MAR 2023

- Designed, prototyped, and integrated complex front-end features and gameplay mechanics using Haxe (Impact engine converts it to C++), and managing branches in Perforce to support live game content
- Engineered custom designer toolsets using C++ and Haxe, empowering team members to rapidly prototype, iterate, and integrate new UI ideas into the build
- Supported live-service event content such as the 2022 FIFA World Cup in-game event that garnered record-breaking DAU
- Tracked feature milestones, managed technical backlogs, and prioritized bugs using Jira while collaborating with cross-functional stakeholders

SKILLS

Unity
Unreal Engine
C#
C++
Lua
Python
AMP
Haxe
Jira
Perforce

PROFICIENCIES

Technical Design and Implementation
Game Content Design
Automation Scripting
Regression Testing

LANGUAGES

English, Cantonese
Chinese

EDUCATION

British Columbia
Institute of Technology,
Burnaby, BC

Diploma in Computer
Systems Technology

EA — *Game Designer* – (FIFA Mobile, EA Impact Engine)

MAR 2022 - SEPT 2022

- Tuned and balanced live gameplay mechanics, utilizing feedback and telemetry data to refine player experience and feature equilibrium
- Owned live content deploy processes for weekly game updates and bug fixes
- Collaborated with cross-functional disciplines to improve design and implementation techniques
- Led the design, prototyping, and implementation of front-end features for FIFA Mobile

Keywords Studios - EA — *Game Security Analyst*

MAY 2021 - MAR 2022

- Collaborated with security and player-first teams to enforce game integrity and anti-cheat standards
- Developed Python and Splunk scripts/queries to investigate security threats and terms of service violations
- Built Splunk dashboards and reports to visualize player data and monitor game health
- Monitored social media and community feedback to identify and resolve live-service issues

Keywords Studios - EA — *QA Development Support III*

JUNE 2019 - MAY 2021

- Executed comprehensive test plans and regression testing for new live-service content
- Developed node-based automation scripts to streamline content testing and validation
- Coordinated with production and design teams to align quality standards logged in Jira
- Authored technical documentation and trained analysts on QA processes
